

Noncovalent Interactions Worksheet and Key

Summary of Noncovalent Interactions:

Noncovalent Interaction	Interaction Between:
<p>Hydrogen Bonding</p> <p>Electrostatic attractive force between the partially positive charged hydrogen end of an O-H, N-H, or F-H bond and the negative charge of a lone pair on an O, F, or N.</p>	
<p>Dipole-Dipole</p> <p>Electrostatic attractive force between <i>two polar molecules</i>.</p>	
<p>London Dispersion Forces</p> <p>Electrostatic attractive force between <i>any two molecules</i>.</p>	
<p>Ion-Dipole</p> <p>Electrostatic attractive force between a <i>dipole</i> and an <i>ion or formal charge</i>. The partially positive charge of a dipole is attracted to a negatively charged ion <i>or</i> a negative formal charge. The partially negative charge of a dipole is attracted to a positively charged ion <i>or</i> positive formal charge.</p>	
<p>Salt Bridge</p> <p>Electrostatic attractive force between a negative formal charge and a positive formal charge in protein.</p>	

Problems (see the key on the last two pages to check your work)

1) List **all** of the *noncovalent interactions* that can occur between the given pairs of molecules.

Molecules	Noncovalent Interaction(s) <i>Which noncovalent interactions occur between these pairs of molecules?</i>
Methane (CH ₄) and Methane (CH ₄)	
$ \begin{array}{c} \text{H} \quad \text{H} \\ \quad \\ \text{H}-\text{C}-\text{C}-\ddot{\text{O}}-\text{H} \\ \quad \\ \text{H} \quad \text{H} \end{array} \quad \text{and} \quad \begin{array}{c} \text{H} \quad \text{H} \\ \quad \\ \text{H}-\text{C}-\text{C}-\ddot{\text{O}}-\text{H} \\ \quad \\ \text{H} \quad \text{H} \end{array} $	
H ₂ O and H ₂ O	
NH ₃ and NH ₃	
$ \begin{array}{c} \cdot\ddot{\text{O}}\cdot \\ \\ \text{CH}_3\text{CCH}_2\text{CH}_3 \end{array} \quad \text{and} \quad \begin{array}{c} \cdot\ddot{\text{O}}\cdot \\ \\ \text{CH}_3\text{CCH}_2\text{CH}_3 \end{array} $	
$ \begin{array}{c} \cdot\ddot{\text{O}}-\text{H} \\ \\ \text{CH}_3\text{CCH}_2\text{CH}_3 \end{array} \quad \text{and} \quad \begin{array}{c} \cdot\ddot{\text{O}}-\text{H} \\ \\ \text{CH}_3\text{CCH}_2\text{CH}_3 \end{array} $	
HCl and HCl	
CO ₂ and CO ₂	
CCl ₄ and CCl ₄	
$ \begin{array}{c} \text{H} \\ \\ \text{H}-\text{C}-\text{Cl} \\ \\ \text{Cl} \end{array} \quad \text{and} \quad \begin{array}{c} \text{H} \\ \\ \text{H}-\text{C}-\text{Cl} \\ \\ \text{Cl} \end{array} $	

2) If the given pairs of substances in the table below were mixed together, list *all of the noncovalent interactions* that could occur.

Choices:

- (A) Hydrogen bonding
- (B) Dipole-dipole forces
- (C) London dispersion forces
- (D) Ion-dipole forces
- (E) Salt bridges

Compound Pairs	List of Noncovalent Interactions
NH ₃ and H ₂ O	
Mg ²⁺ and H ₂ O	
Cl ₂ and H ₂	
Acetic acid and H ₂ O $\begin{array}{c} \cdot\ddot{\text{O}}\cdot \\ \\ \text{CH}_3\text{C}-\ddot{\text{O}}-\text{H} \end{array}$ Acetic Acid	
SO ₂ and H ₂ O	
SO ₂ and H ₂ S	
ethane (CH ₃ CH ₃) and methane (CH ₄)	

Key

1) List **all** of the *noncovalent interactions* that can occur between the given pairs of molecules.

Molecules	Noncovalent Interaction(s)
Methane (CH ₄) and Methane (CH ₄)	London dispersions forces
$ \begin{array}{c} \text{H} \quad \text{H} \\ \quad \\ \text{H}-\text{C}-\text{C}-\ddot{\text{O}}-\text{H} \\ \quad \\ \text{H} \quad \text{H} \end{array} \quad \text{and} \quad \begin{array}{c} \text{H} \quad \text{H} \\ \quad \\ \text{H}-\text{C}-\text{C}-\ddot{\text{O}}-\text{H} \\ \quad \\ \text{H} \quad \text{H} \end{array} $	hydrogen bonding, dipole-dipole forces, London dispersions forces
H ₂ O and H ₂ O	hydrogen bonding, dipole-dipole forces, London dispersions forces
NH ₃ and NH ₃	hydrogen bonding, dipole-dipole force, London dispersions forces
$ \begin{array}{c} \ddot{\text{O}} \\ \\ \text{CH}_3\text{CCH}_2\text{CH}_3 \end{array} \quad \text{and} \quad \begin{array}{c} \ddot{\text{O}} \\ \\ \text{CH}_3\text{CCH}_2\text{CH}_3 \end{array} $	dipole-dipole forces, London dispersions forces
$ \begin{array}{c} \ddot{\text{O}}-\text{H} \\ \\ \text{CH}_3\text{CCH}_2\text{CH}_3 \end{array} \quad \text{and} \quad \begin{array}{c} \ddot{\text{O}}-\text{H} \\ \\ \text{CH}_3\text{CCH}_2\text{CH}_3 \end{array} $	hydrogen bonding, dipole-dipole forces, London dispersions forces
HCl and HCl	dipole-dipole forces, London dispersions forces
CO ₂ and CO ₂	London dispersions forces
CCl ₄ and CCl ₄	London dispersions forces
$ \begin{array}{c} \text{H} \\ \\ \text{H}-\text{C}-\text{Cl} \\ \\ \text{Cl} \end{array} \quad \text{and} \quad \begin{array}{c} \text{H} \\ \\ \text{H}-\text{C}-\text{Cl} \\ \\ \text{Cl} \end{array} $	dipole-dipole forces, London dispersions forces

2) If the given pairs of substances in the table below were mixed together, ***list all of the noncovalent interactions*** that could occur.

Choices:

- (A) Hydrogen bonding
- (B) Dipole-dipole forces
- (C) London dispersion forces
- (D) Ion-dipole forces
- (E) Salt bridges

Compound Pairs	List of Noncovalent Interactions
NH ₃ and H ₂ O	A, B, C
Mg ²⁺ and H ₂ O	D (We will limit London dispersion forces to molecules and polyatomic ions; they are too small to be significant in monatomic ions in most applications)
Cl ₂ and H ₂	C
Acetic acid and H ₂ O $\begin{array}{c} \cdot\ddot{\text{O}}\cdot \\ \\ \text{CH}_3\text{C}-\ddot{\text{O}}-\text{H} \\ \text{Acetic Acid} \end{array}$	A,B,C
SO ₂ and H ₂ O	A,B,C,D (There is a formal charge of (1-) on an oxygen in SO ₂ ; consider the line bond structure and you will see an oxygen that has <i>just one single bond</i> .)
SO ₂ and H ₂ S	B,C,D
ethane (CH ₃ CH ₃) and methane (CH ₄)	C
